1 Route 53 Routing Policy

Concepts of Amazon Route 53

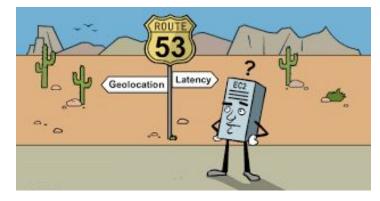

What is Routing Policies?

Routing Policies

- Routing Policy is a component that is used for configuring the traffic according to different types of scenarios.
- How traffic is routed depends on which topic the policy is based on.

Multivalue Answer Routing Policy

IP Based Policy - Announced June 1 2022

With the addition of IP-based routing, customers are now additionally empowered to fine-tune their DNS routing approach based on the Classless Inter-Domain Routing (CIDR) block that the query-originating IP address belongs to, allowing them to leverage knowledge of their end user base to optimize performance or network transit costs.

DNS Health Checking

2

4

DNS Health Checking

- Health Checking is a function that checks whether your servers working properly.
- It helps to route internet traffic away from unhealthy server and keep the web application alive and prevents interruption.
